
When you plug your USB device into your computer, it can sometimes cause the driver on the computer to stop working. If this happens, the device won't work on that particular computer and you will need to download a new driver for that device that's compatible with Windows 7 64 bit. This process has three steps: 1) Plug in your USB device and allow Windows 7 64 bit recognize it. 2) Find out what software is currently installed so you can see what drivers are available to install for it. 3) Download and install the appropriate driver from the list of drivers for Windows 7 64 bit so your hardware will function properly again. If this happens, follow these instructions: <http://www.howtogeek.com/howto/windows-7/fix-any-bad-driver-always-missing/> If this is not the case, then you may just need to replace the driver. You can do this manually or with software, but be careful because sometimes it can cause your computer to lose data. Before installing the new driver, right click the device that's connected to your computer and click Properties. Next, uncheck all features except Connected Standby and Plugged In because Windows 7 64 bit will be trying to use those features while it installs a new driver. Now, run the new driver and follow the instructions on your computer screen. If you need to find a compatible driver for your USB device because you've lost the original, use <http://www.update-driver.com/> or <http://www.best-driver-updates.com/>. If this happens, follow these instructions: <http://www.howtogeek.com/howto/windows-7/fix-faulty-usb-drivers/> . If this happens, follow these instructions: http://support.exeemsoftusa.com/kb_article.asp?id=177 . If this happens, follow these instructions: <http://www.howtogeek.com/howto/windows-7/fix-faulty-usb-drivers/>. This is a common problem that can be fixed by updating drivers for your USB devices. There are many USB device manufacturers, each providing drivers you can download to make your computer recognize the device. The driver updates for Windows 7 64 bit are found here: <http://www.update-driver.com/> or <http://www.best-driver-updates.com/>. To update the drivers for Windows 7 64 bit, follow these instructions: 1) Plug in your USB device and allow Windows 7 64 bit recognize it. 2) Find out what software is currently installed so you can see what drivers are available to install for it. 3) Download and install the appropriate driver from the list of drivers for Windows 7 64 bit so your hardware will function properly again 4) Open Device Manager and right click your device that isn't working properly. 5) Choose Properties and click on Driver under Property options. You should then be able to choose Update Driver from the list of options on the right side of the screen. 6) Choose how to search for updates from here.
